INVENTORY MANAGEMENT FOR AN ORGANISATION

ABSTRACT:

PROBLEM STATEMENT:

The problem faced by the company/organization is they do not have any systematic platform to record and keep their inventory data. It is difficult for the admin to record the inventory data quickly and safely because they only keep it in logbook and not properly organized.

SOLUTION:

Our solution aims to develop a robust and user-friendly inventory management system that addresses the challenges faced by an organization in maintaining their inventory. The main goal of our product is to manage the assets of an organization/company in a systematic manner. It's important for an organization/company to maintain or manage the records of assets for a proper workspace and it's easy for an admin to organize as well. Our product has exact records of the assets of an organization/company. Admin can add, drop, change the data. And we separate the assets into categories (electronics, stationery, furniture, toiletries, etc.) and the user (admin) can trace the location of the asset. Our product helps the admin to analyze the assets. The system provides a user-friendly interface to list all inventory items within selected categories, streaming the process of finding items.
